Richard Whitley, MS
Director
Department of Health and Human Services

In accordance with **NRS 439.865**, each medical facility is required to develop an internal patient safety plan to protect the health and safety of patients who are treated at their healthcare facility.

The patient safety plan is to be submitted to the governing board of the facility for approval and the facility must notify all health care providers who provide treatment to patients in their facility of the plan and its requirements.

Ninety five (95) Patient Safety Plan's were submitted, mostly medical facilities, and included here. Two hundred seven (207) Annual Reports from Healthcare and Medical facilities were submitted. Of the more than 1,800 healthcare facilities licensed in Nevada, 48 hospitals, 15 rural hospitals and 88 ambulatory surgical centers represent medical facilities expected to file a Patient Safety Plan per NRS.

The Division of Public and Behavioral Health has prepared a base template for the Patient Safety Plan to help guide those facilities that are unable to build their own Patient Safety Plan (PSP). Each facility is expected to incorporate appropriate content to fit their specific needs. **SER Patient Safety Plan Template**.
